Case Study 5001-16999-P

JURYS INN

With an existing control system failing to achieve the required comfort levels EPA Ltd were brought on site and tasked with supply and commission of a bespoke controls solution.

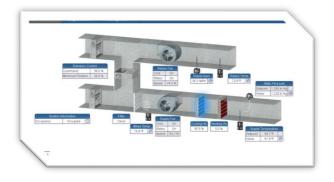

Not only were the comfort levels an existing issue, there had also been a failure of frost prevention routines which had led to mechanical issues on site.

EPA Ltd chose a **Distech ECY controller** with an integrated web browser to display the animated graphics and alarm handling. Easily expandable for future works on site.

All controls were housed in an 800 x 600 MCC integrating with wall field mounted VSD's and devices

With a strict deadline for completion EPA Ltd designed, built and commissioned on time ensuring fully operational plant over the Christmas period.
